

iScope materials science (metallurgical, asbestos research)

Microscopes for materials science applications have the specific objectives and other tools like incident illuminations, polarization and compensation filters. This allows precise observation of materials like metals, plastics, minerals, asbestos, glass, wood and chemical materials. Euromex offers a range of metallurgical microscopes, microscopes with rotatable stages and stain-free objectives for polarized light observation, microscopes for asbestos identification and inverted materials science microscopes

iScope for metallurgical

The iScope microscope are supplied with specific attachments that turn the iScope into a state-of-the art material science microscope suitable for various applications. Beside the polarisation microscopes there are two types of materials science microscopes. Metallurgical and microscopes specially for asbestos identification
